

### County Agent's Notes

By Robert F. Spence

**4-H Club Camp**  
Twenty-five or more 4-H Club members, leaders, and County and Home agents, left Mt. Vernon Monday morning, July 9, for Levi Jackson State Park, to attend 4-H Club annual camp. 200 Club members and leaders will represent 10 counties at this 4-H Training Camp from July 9-13.

A daily program will be carried out on each day by agents and instructors. Thursday, July 12 is visitors day. The evening program of July 12 will be the closing program.

The Lions' Club of Mt. Vernon and Berea are furnishing transportation.

The following Club members and leaders will represent Rockcastle and Southern Madison at the annual 4-H Training Camp: Allen DeJarnett, Phillip Frederick, James Larry Crowder, Lee Hasty, Charles Staley, Herlis Hall, Jr., Preston Hill, Donald Cox, Bobby Grant, Billy Romans, Billy Combs, Eugene Bowling, Jean Bullen,

Kathryn Bullen, Helen Bishop, Kathryn Bishop, Ruth Thomas Sarah Kirby; Betty Walden, Grace Ann Mason; Betty Carter, Mildred Croley, Marie Powell and Christine Lamb. They will return home Friday afternoon.

**Farmers' Field Day**  
Let's not forget Rockcastle Farmers' Field Day July 18, starting at Mason Poynter's farm at 10:00 a. m. Every one interested in the progress of Rockcastle County is invited to attend Field Day. Lunch will be served by Quail Homesteaders' Club on Mr. M. W. Whitehead's farm at 11:30 a. m.

Mr. Russell Hunt, tobacco specialist; M. Leonard, soil specialist; and Mr. McClain, beef cattle man, from the State College of Agriculture will be with us to discuss farm problems. Agricultural progress will be noted as outstanding on these farms. You can't afford to miss Field Day.

### August Is Green Pasture Month

On May 28, 1951, Kentucky's Governor, the Honorable Lawrence W. Wetherby, issued a proclamation stating that the month of August would in 1951 again be recognized as Green Pastures Month in the State of Kentucky.

August is so proclaimed because it is the month during which lush-green well-managed pastures are the most noticeable to passersby, and the most appreciated by the livestock farmers who have produced them. It is the time when the following year's pasture program on the farm is planned and started. August is the best month in the year in which to seed-down new grass-legume pastures on a fine, firm seed-bed, the preparation of which should be started in July. It is the month to renovate old non-productive pasture sods, by ripping them up, applying needed lime and fertilizer, and re-establishing a balanced mixture of high-producing pasture grasses and legumes. Mid-August to mid-September is the proper period in which to make liberal applications of fertilizers to already established

ed pastures and legume-grass hay crops, for the purpose of reinvigorating the legume stands and maintaining high production during the late fall, and through the following spring and summer.

Wonderful cooperation, worthy objectives carrying a common benefit to all citizens, widespread interest and participation, and unselfish work, are making an outstanding success of the Kentucky Green Pastures Program. During the past year pasture and grassland developments in this state, under the inspirational influence of the "Green Pastures Program" have progressed faster and farther than it was previously possible to conceive. In little more than a year's time, the Kentucky Green Pastures Program and the people of Kentucky have gained national recognition for the accomplishments of their organized efforts in a "pasture program."

Throughout the state many local "Green Pastures" activities are being planned for August—Pasture Month. The Kentucky Green Pastures Committee—Kentucky Future-Bred Livestock Association—cooperating again this year, to highlight the "Pasture Month" observance with a series of three "better-pasture," "better livestock" field day, to be held in the eastern half of Kentucky, August 15-17, as per the following schedule:

August 15, Boyle County, on

the farm of Ancl Herndon, near Danville, a 1950 pastureman; August 16, Fleming County, on the Charles Gorman farm, near Flemingsburg. A August 17, Wolfe County, at the H. C. Rose farm, and the Hazel Green Institute, near Hazel Green.

This year some 3600 Kentucky farmers are enrolled participants in the "Green Pastures Program." However, these are by no means the only participants in the "Program," they are merely the demonstrators who are enrolled to be considered for individual recognition of their accomplishments. There are thousands of farmers not enrolled, who are doing outstanding jobs of grassland farming and pasture production. There are thousands more who are starting little by little to establish productive pastures on here-to-fore waste land, and to renovate old, non-productive pastures. They are fertilizing established pastures and hay crops in accordance to their needs, rotating pasture fields, aging pasture like the important and productive crop that it is. Then there is that multitude of Kentucky folks in all walks of business and professions who are not farm operators or pasture-livestock producers, but who have a deep interest in the economic welfare of Kentucky and her agriculture. They write and talk about grass and improved pastures; they attend pasture meetings, and show a keen interest in the progress of

pasture-livestock development that is being made by their customers and fellow-businessmen, the farmers.

All of these, although they may not be officially enrolled in the "Green Pastures Program," are definitely taking part in it, and they are making an outstanding and most essential contribution to the success of the "Program" and its ultimate goal of transforming Kentucky into the Nation's leading pasture and livestock state.

What is the best pasture mixture to sow? This is a very popular question throughout the State. Strange as it may seem, there is no "best" pasture mixture or grass-legume combination for the State of Kentucky, but there are a number of excellent ones. This is one of the factors that makes Kentucky with great grass-legume production possibilities. Practical every prominent hay and pasture producing legume known, if given proper treatment, will stand and produce well in this state. Kentucky is accepted as the source of some of the three basic grasses that are nationally famous for their pasture producing qualities—namely: Kentucky bluegrass, orchard grass and Kentucky 31 fescue. Timothy and red top are secondary pasture grasses that do well here.

One grass-one legume; or two grasses-one legume; or maybe one grass-three legume; or three grasses and three legumes. Kentucky farmers can take a choice that they consider in keeping with their particular livestock needs, soil conditions, desires, or just plain whims and it will be the "best" mixture for their farm. The enterprising pasture producer does not

"put all his eggs in one grass basket."

**BRINDLE RIDGE**  
By Wanda Lee Burdette

Mr. and Mrs. Arvel Burdette are rejoicing over the arrival of a baby daughter, born July 6. She has been named Janice Jean.

Mr. and Mrs. Gilbert Mink have returned to their home in Indiana after a week's visit here.

Mr. and Mrs. Charley Cummins visited his parents, Mr. and Mrs. Emmett Cummins, at Green Hill Sunday.

Miss Myrtle Smith is ill.

Mr. and Mrs. Willis Coffey, Keith Coffey and Mr. and Mrs. Amos Burdette spent Sunday with Mr. and Mrs. Jim Burdette.

Mr. and Mrs. Robert Cummins of Lockland, O., are visiting relatives here this week.

Mr. and Mrs. Charlie Carter of Tennessee spent a few days with Mr. and Mrs. Jim Burdette this week.

#### What You Should Know About Oil

Based on known facts and those facts co-ordinated with reasonable theories reasoned out from those known facts scientists now agree that crude oil, the commercial uses of which so comparably a short time ago were unknown to man, but now become about the biggest industry of the country, was "laid" on the earth in the following manner:

First let us say as a rule scientists seek truth and give the facts to the world as they find them, yet they are not unbelievers in God's handiwork as disclosed in The Bible, but

seek to reconcile the known facts of the universe with those things disclosed in The Bible.

As an illustration The Bible says, "that a thousand years are as a day with God, and that being an illustration therefore they believe one can say even a million years are but a day."

And it does seem that based on known facts that a vast general plan was made and general laws of nature set in motion so that our universe began to take shape and was thus formed through vast millenniums and ages of time. So boiled down and stated we hope in terms the average man can understand, seems to be the processes of nature by which crude oil and of course gas was formed, gas lying with and being a product of those elements under a different form which made the oil.

In this short article it is impossible to go into the entire subject. All of it has not been

yet discovered. It would take volumes to tell all of the story that has gradually been pieced together.

The story of oil runs back into the early stages of the earth's formation and history. The first chapters of the account were written in the record of the Ancient seas.

As the crust of the earth, at first a molten mass, cooled and waters were formed, the seas periodically advanced and receded. That those seas engulfed Rockcastle County cannot be doubted as we find here on the surface fossil shells and fossil sea animal life and parts of ancient coral reefs and the shell embedded crusts of the line of the sea shores, so in their extreme expanse these seas mingled the waters of the equator with those of the arctic, but always whatever their size, rivers flowed down to the seas throughout the ages, and then as now carried with them vast quantities of mud and sand to be spread out by currents and

tides over the entire bottom. Each day and each year through millennium after millennium new deposits were distributed layer upon layer over the sea floor. Thus were built up the thick series of shales and clays and sandstones which characterize the formation of our present oil and gas wells.

Lacking any other reasonable explanation we must accept the conclusion that the sea bottom muds and sands of the geological past, squeezed by the weight of the thousands of feet of the overlying muds and sands, crumpled and broken and finally finally above the level by the movement of the earth's crust around and beneath them, became the shales, limestones and sandstones of today.

And we must accept the conclusion that the mud containing vast quantities of small organic life together with unbelieveable quantities of other and larger marine life, and plant life and of land animal life which came into the seas with the silts and sands carried thence by the rivers, and the enormous masses of giant growth of tropical vegetation which were thus swept into the seas, were the source materials of petroleum.

These masses of animal and vegetable life, buried by subsequent deposits of mud, silt, lime and shale, sealed from the air, and further protected from ordinary decay by the brine of the ocean itself were subjected to a slow decomposition which finally yielded among other things the petroleum of commerce.

But petroleum so formed and disseminated uniformly through great bodies of organic mud and sands was not yet available to man. It has still to be concentrated to accumulate in definite limited reservoirs such as the pore spaces between the grains of a bed of sandstone, or in the cracks and crevices of a limestone, whence it can issue under pressure into the

wells which the operator drills into the reservoir.

This concentration of petroleum, or as the geologists say "The trapping of it" into those reservoirs, was accomplished in part by great pressure which transformed the mud into a dense shale, at the same time driving the oil into the more open noncompressible sands and limestones, and in part by salt water moving down through the bed, or rising up under pressure from greater depth, also by pressure caused by the upheaval of the sub structures of the earth itself, until the oil or gas finally accumulated and was thus held in rock folds known as anticlines and other foldings, and in domes or against the faulted broken edge of a sandstone or lime formation, whence it could not be dislodged except by the drill.

Ed. Note—Since oil and gas are one of the main topics being discussed in this county at this time we thought an article of this type should be interesting. Data for the article is credited to an experienced oil operator and geologist.

### ROCKCASTLE FACTS and STORIES

By RALPH GRIFFIN

The events recorded in this column during the past few issues seem to have been characteristic of the lawless period which existed for many years following the Civil War. Depredations against the railroad were probably occasioned because there was something new, a new game against which the mountain outlaw might pit his wits for profit or amusement. The other side of the picture was that the railroad received the hearty co-operation of the better element of our citizens of some fifty years ago. One

and of many county officials. The coming of the railroad was generally recognized as a mighty stride toward the economic betterment of Rockcastle. Saw-mills sprang up all over the county. Timber and coal lands were to be had for a song and there was plenty of "wild land" where timber could be cut and coal mined, with no one to say nay. The possibilities for acquiring cheap land may be found in the records of Sheriff's Tax Sales some fifty years ago. One

tract of 400 acres was listed to satisfy a tax claim of \$6.13. Another 800 acres listed for a tax of \$16.30; hundreds of other entries of like nature. Prior to 1910 there was not a yard of turnipke in Rockcastle. Main streets of the town were nothing but hog wallows where cattle and hogs wandered and grazed at will. Accumulations of such products as existed were tended by "militia" labor; the rare exceptions the deplorable conditions of these so-called roads were aggravated rather than improved by this enforced work. Under such conditions it seems almost impossible that the first timber products could have been hauled and dragged for a distance of fifteen and twenty miles to a loading point upon high upon some hillside, "sawed" down to the nearest road, way with oxen or horses, loaded upon rude wagons and taken to the nearest saw mill. There it was sawn to desired lengths, reloaded and hauled to the nearest loading point. Cross-ties were felled for their bark. New ground was often cleared for the tending of mediocre corn crops and the vines, plants burned and destroyed where they fell. Prior to 1910 there was not a yard of turnipke in Rockcastle. Main streets of the town were nothing but hog wallows where cattle and hogs wandered and grazed at will. Accumulations of such products as existed were tended by "militia" labor; the rare exceptions the deplorable conditions of these so-called roads were aggravated rather than improved by this enforced work. Under such conditions it seems almost impossible that the first timber products could have been hauled and dragged for a distance of fifteen and twenty miles to a loading point upon high upon some hillside, "sawed" down to the nearest road, way with oxen or horses, loaded upon rude wagons and taken to the nearest saw mill. There it was sawn to desired lengths, reloaded and hauled to the nearest loading point. Cross-ties were felled for their bark. New ground was often cleared for the tending of

the point where the timber was felled. Men and their teams were expected to duck at back-breaking toil for what now seems a mere pittance, but to many it meant the difference between exposure or starvation for their families. In the pioneer days, life in these hills had been possible due to the abundance of game animals and forest fruits and nuts. With an increased population game had been depleted until this source of supplies could no longer be depended upon to stock the family larder. With county organization the citizens learned what it meant to pay taxes. The rate was ridiculously low and the average land-owner would pay less annual tax than a pair of shoes would cost him today. Despite this fact even these small amounts were hard to little actual since there was but little actual land in cultivation about the county but there was little surplus raised and no market for it. Corn was still the principal crop and it was fed to stock to raise more corn to feed to stock in circulation. The rate commanded much cash value in isolated sections.

To The Voters Of Rockcastle County:

Caleb McFadden, of London, Kentucky, who is now a candidate for the office of State Senator of the 19th Senatorial District composed of the counties of Clay, Jackson, Laurel, Rockcastle and Owsley, was born and reared on a farm about eight miles from London, in Laurel County. His mother having died in his infancy he was reared by grandparents. He has worked on the farm, in the log woods and as clerk in our stores. He is 38 years old and the father of five children, one in high school, one in the grades and three not yet in school age. Mrs. McFadden was Bessie Rader of Laurel County before their marriage.

Mr. McFadden is a Christian man and has been an ordained and active Baptist minister since 1938, he has served faithfully in his calling among the rural churches and communities of this District.

He served Laurel County as Master Commissioner of the Laurel Circuit Court for 6 years, and as Circuit Clerk for the past approximately five and one-half years. His official acts and personal conduct have been above reproach. He has remained faithful to the ministry while in office.

We believe Caleb McFadden is qualified to and will serve our District ably and honestly. He is not the candidate of any man or special interest, his interest will be the peoples' interest. His platform promises opposition to the Liquor Industry, a fight for Better Roads in our District, a better program of Rural Electrification, increased old age assistance, also the needy blind and dependent children. More help for the schools of our District and support for a bonus for Kentucky's veterans.

We earnestly and humbly solicit your friendship and support for Mr. McFadden in this race. We believe the need for men and women of high moral standards in our law-making body is great in these troubled times. We believe, Mr. McFadden will be a foe of wrong and always a friend of right.

**VOTE FOR A CONTINUANCE OF FAITHFUL FRIENDLY SERVICE IN THE CIRCUIT COURT CLERK'S OFFICE BY CASTING YOUR VOTE FOR:**  
G. W. (BRO) MURPHY (X)

Either One of the Judges will do me, I just desire to keep Books for Him and You.  
I'll appreciate your vote and support, Saturday morning or evening, August 4, 1951, between 6 A. M. and 4 P. M.  
"Please help me to keep the Jam on the lower shelf; so the little poor fellow can get it without having to reach up on the highest shelf."  
I am your friend here, in the Court House, in your home, and in your church. God Bless you.  
G. W. (BRO) MURPHY

**BRODHEAD FAIR**  
(Continued from page one)  
country and has now become one of the most popular cakes baked in the home.  
Betty Crocker and her staff have spent 25 years and many thousands of dollars trying to develop an easier, quicker, and more moist foam-type of cake. This was finally accomplished in early 1948 by discovering a cake using a cooking or salad oil rather than the conventional type of cake shortening. The salad oil plus a simplified mixing technique resulted in a cake not only satisfactory but actually superior in every way to the standard sponge cake.  
It's a unique cake hence will be alone in a category at this year's fair.  
Reports from fair officials indicate that floral hill is much improved over prior years with several new entries and more competition.
