

Farm And Home News

BY H. Lee Durham and Martha Owen County Extension Agents

Are You A Good Poultryman?

By watching and listening, a good poultryman knows when chicks are happy and comfortable... He knows that a tame pullet makes a good hen...

Repair Terrace Breaks

Repair terrace breaks by tamping in some stiff clay soil and, if it's in a pasture, pack some sod on top...

Hunt Urges that Beds be "made" as soon as the land is workable

Hunt urges that beds be "made" as soon as the land is workable (dry). Bed sites should be back-turrowed to give a barrier against surface water...

Alfalfa is the cheapest and best hay crop known

Alfalfa is the cheapest and best hay crop known. To get a good stand and keep it producing at a high rate is what all farmers want...

Grain and Roughage Rations Need Correct Preparation

Grain and roughage portions of rations for beef cattle should be carefully prepared, says George D. Pendergrass...

seeded alone - 12 to 15 pounds per acre.

8. Cover the seed lightly after seeding. 9. On Spring seedings be sure and wait until full bloom before you cut the first crop.

March 15-30 Seeding Time Urged For Tobacco Beds

While burley tobacco beds can be made now (plowed and prepared), March 15-30 is the recommended time for seeding.

Hunt urges that beds be "made" as soon as the land is workable (dry).

Weed seed can be killed by burning or methyl bromide. Beds so treated may be seeded from 1 to 2 days after treatment.

Beds drenched with weed-killers, however, can NOT be safely seeded for 15 to 21 days. It takes that long for chemical drenches to disappear from the soil.

Plant bed experiences in 1960 - a very dry spring - showed that by proper management, plants were available 45 to 50 days after sowing.

Fashion Highlights - Spring '61

The fashion press is bemoaning the fact that spring fashions aren't new enough or startling enough to make headlines. This fact, however, should please the consumer...

around the corner. To take full advantage of the best growing conditions

around the corner. To take full advantage of the best growing conditions and to save time when the weather opens up for other farm work...

Don't use just any fertilizer, but use the one that gives the best return. Remember \$1 invested in the proper fertilizer returns up to \$5 worth of feed.

A pasture having a good stand of grasses and legumes needs to be treated differently than a pasture having a good stand of grasses and little or no legumes.

If you need both phosphate and potash in a good grass and legume pasture use 300 pounds of 0-20-20 or 200 pounds of 0-30-20 or their equivalents.

If grasses, with little or no legume, is all you have in your pasture and this is all you want, the nitrogen in your fertilizer program. If phosphate and potash are needed they too must be applied for the nitrogen.

Dresses - simple, relaxed, flared in line; two-piece, one-piece with flounce or flare, bias cut; collars; sleeveless; especially in the costume dress.

So, don't put Fertilizing off, put it on!

Fashion Highlights - Spring '61

The fashion press is bemoaning the fact that spring fashions aren't new enough or startling enough to make headlines. This fact, however, should please the consumer...

Concentrate, we mean that it doesn't contain filler or roughage

Concentrate, we mean that it doesn't contain filler or roughage material. Under present circumstances it will pay to feed each cow a little as eight pounds of hay or silage equivalent...

New thirty-six pounds of grain per day is a lot of grain and we suggest that the cow's ration be increased one pound per day until she reaches her requirement or refuses some grain.

Research work at our own Experiment Station at Lexington has shown that this amount of grain can be profitably fed with no bad side effects.

Take Care

The tobacco growing season is getting near, and dealers should remind growers that tobacco is extremely sensitive to 2,4-D, 2,4,5-T and many other weed and brush killers.

Care should also be used in applying insecticides and fungicides to tobacco beds.

If we are faced with buying either more hay or more concentrate, under present conditions it will probably pay better to put our money in additional concentrate.

Fashions in the making: collarless necklines, fuller skirts, princess or flared silhouette, full swinging coats, short sleeves even in coats, raglan

Poison Control Centers

Over 400 Poison Control Centers have been established in recent years in many metropolitan areas of the country. These centers supply information concerning potentially toxic substances which are swallowed, inhaled or absorbed through the skin.

If poisoning does occur, call a physician immediately. Valuable time can be saved if you will read the label instructions on the original container of the poison.

The names of the active ingredients of the materials and the first-aid instructions or antidotes may be given on the label.

It is suggested that the addresses and telephone numbers of the Poison Control Centers be carefully filed or posted in your place of business so that the information can be at your fingertips should the need arise to contact these centers.

**Celebrates Birthday**

Mrs. W. P. Hayes celebrated her 97th birthday Sunday. Those present were, her brother,

**Start seedlings right with Dowfume MC-2**

Get tobacco seedlings off to a fast, uniform start with Dowfume MC-2 soil fumigant. Applied under a "Polyfilm" plastic seed bed cover, Dowfume MC-2 rids beds of nematodes, wireworms, soil-borne diseases, weed and grass seeds. It's fast—only two hours to apply, one to two days to do its work. Two to four days later, you can plant. Dowfume MC-2 is easy to apply and practically eliminates costly hand weeding. This year raise better, healthier seedlings with Dowfume MC-2. See us today for your supply.
