let's shed a little light!

... on rural electricity and rural electric co-ops. First, what are they? They are user-owned electric power cooperatives... organized and built by their farmer members. What is their main purpose? To bring electric power to rural communities at a reasonable price. Are co-ops government owned or supported? No. The user-owners borrowed money from the government, at a set interest rate, to build and equip their lines. This money must be repaid within 35 years and every Kentucky co-op is up-to-date on payments.

Are co-ops tax-free? No. Rural Electric Co-ops, singly and collectively, are among the biggest taxpayers in Kentucky and the taxes so collected are used for the benefit of all Kentucky... not just farm communities.

And here's another important point: Kentucky's farmers originally built their rural cooperatives for one purpose only... to get the electric power they could not buy elsewhere! Out of their cooperation has grown a force powerful enough to keep Kentucky's prosperity growing.

Kentucky's Rural Electric Co-ops help everyone

"With one oil change, I earn enough to buy a whole week of electric water heating"

"I always figured convenience like electric water heating would be expensive," says Z. T. Jones, garage owner in London. "Sure was surprised to learn it takes only a few minutes work to earn enough to pay for a whole week's water heating."

Mrs. Jones adds, "We get so much for our money with an electric water heater. All the hot water we can use — clean, efficient operation — and just the right location so heat isn't lost in long pipe-runs."

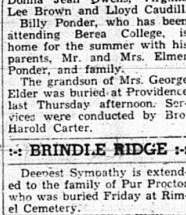

"Whenever my friends ask me what's the best water heater to buy, I say electric."

ROY WINSTEAD PHONE: 256-2826 MT. VERNON, KY.

Shell experts test for knock by accelerating up steep grade. In another test, that "fifth wheel" in the back is lowered onto the road to measure mileage precisely.

TOP PERFORMANCE:

Shell test crew reveals five ways to test your car for top performance—and how the 9 ingredients in today's Super Shell can help you get it

Test #1. Quick starting

Count the seconds it takes to start your car. The engine should "snap to" in about two to three seconds. A slow start drains your battery. And it may flood your cylinders, causing performance troubles.

If your engine is balky, try Super Shell. It's blended with a frisky ingredient called Butane—

to give you quick, easy starts.

Test #2. Smooth running

Pay close attention to your engine in traffic.

Does it vibrate roughly when you stop for a traffic light? Does it seem to "surge" as you pull away, then falter and fade?

The problem may be the wrong blend of gasoline.

In summer, for example, excessive heat can make winter grade gasoline bubble in the fuel line. Bubbles can interfere with the flow, causing rough running.

Shell scientists don't let that happen with Super Shell. When hot weather threatens, they adjust Super Shell's 9-ingredient formula to give it the correct volatility for smooth summer driving.

Test #3. Reserve power

On a turnpike, in light traffic, accelerate suddenly from about thirty miles an hour to the legal limit. Now ask yourself:

1. Did your car accelerate smoothly—with no faltering, no bogging down?
 2. Do you have plenty of power to spare?
- If you feel you've "run out of engine," it's time to do something about it.
- Super Shell may be your answer. It contains TCP,* to help restore power lost to combustion chamber deposits.
- And another Super Shell ingredient, called Platformate, contains components that release 11 per cent more energy than even the finest of 100-octane aviation gasolines.
- Test #4. Knock**
- Accelerate up a long, steep hill and listen carefully. If you hear a sound like marbles falling into an empty oil drum, you've got knock. It could cause engine trouble.
- Take no chances. Switch to Super Shell. Its formula includes no less than three ingredients to fight the various causes of knock.
- Test #5. Miles per gallon**
- Don't trust your fuel gauge when you measure miles per gallon. Take these three simple steps and be sure.
1. Start your test by filling your tank. Make sure the gasoline comes up to the brim. Write down your mileage reading.
 2. Drive in your normal manner for at least three tankfuls.

- keeping a record of the exact amount you buy.
3. Finally, fill your tank to the brim again. Add up all the gallons you've bought (not counting the initial fill-up in step 1.) Divide this amount into your total miles traveled. This gives you your miles per gallon.
- Try this test with three tankfuls of Super Shell. You'll see what top performance really is.
- Super Shell's 9 ingredients for top performance**
- Super Shell now contains 2 octane boosters, 1 mileage booster, 1 quick-start component, 1 fast-warm-up ingredient, 1 anti-knock mix, 1 gum preventive, 1 anti-stall ingredient, and new, improved TCP. These nine ingredients all work together to give your car top performance.

A Bulletin from Shell Research—where 1957 scientists are working to make your car go better and better.

*Trademark for Shell's unique gasoline additive. Gasoline containing TCP is covered by U. S. Patent 2882122

To All Former and Present Patients
Rockcastle County, Kentucky

Dear Patients:

Indeed it is a sorrowful duty of mine at the present time to announce to you that I must take leave of full time practice here in this community commencing June 17, 1961. Certainly I have enjoyed the privilege of serving you, both in the hours of joy and sorrow experienced by you.

Throughout my stay here I have endeavored to do what was considered by myself as right for my patients, and if at any time, any hard feelings have been engendered, I am truthfully regretful.

For patients who would still like to see me on a professional basis, in a limited practice basis, appointments must be made by contacting Mrs. Ann Mullins at 256-2316.

Regarding my immediate future plans, I am re-entering training to complete my specialty.

Wishing you and yours and Rockcastle County all the prosperity that could be bestowed upon you.

Sincerely,
Donald L. Arnett, M. D.
