Dairying Has Changed Keep Active World Still Depends On Milk

By: James Coomes
Agriculture Teacher
Brookhead School

The first record we have of the dairying industry dates from 3100 B. C. At that time cows were small, horned animals which were milked from behind.

Since 3100 B. C., many changes have come about in dairying. Let us consider three phases of milk production and how they have changed in the past 60 years. The volume of milk produced has increased both because of an increase in the number of cattle and because of increased production per cow. In 1910 the average cow produced 2900 pounds of milk annually. Now this figure is near 5000 pounds.

Four factors have contributed to this increase. Improvements in breeding, and thus in the type of cow, have been largely responsible for the increase. So influential, however, has a variety of improvements in feeding and caring for the animal. Directly or indirectly, with this phase is the development of educational organizations to help the dairymen make the most of their findings in the dairy industry. Last, but not of least importance, are the new inventions, such as milking machines, which enable the dairymen to handle more cattle in the same amount of time.

A second major change in dairying has occurred in the type of products marketed. For many years, most milk was churned and butter was sold as the chief product. This was due to the distance from markets and the lack of quick, easy transportation. Now the production and marketing of fluid milk is possible because of better means of transportation and the presence of refrigeration.

The third major change in dairying has been in the quality of the marketed product. Greatly contributing to this have been better sanitation and new inventions. Such items as milking parlors and milk coolers enable the dairymen to maintain sanitary conditions from the cow to the market.

Upon considering all the milk industry and its changes in the past 60 years, we should have little trouble understanding the importance of milk to our nation's health and its nature's most perfect food.

Dairy Foods

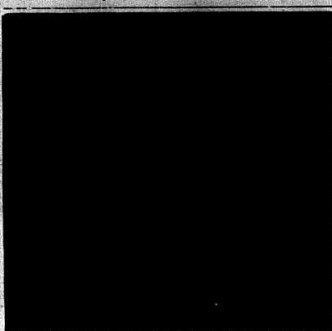

By: Kixie Owens

Home Demonstration Agent
To maintain good health the body demands a variety of many kinds of nutrients—proteins, minerals, vitamins, fats, carbohydrates. These are daily food plan should include an adequate supply of dairy foods, meats, vegetables, fruits, breads and cereals. Each of these foods has a specific job to do in meeting the dietary needs of the body. Our contribution and concern is the dairy foods and their place in the daily diet.

There is no finer food than milk. It is the leading source of calcium—essential for the development of bones and teeth, proper functioning of muscles and nerves—the clotting of blood. In addition, milk contributes high quality protein, iron, zinc, and other vitamins and minerals.

In our world of today different dairy products have been made available through research and improved manufacturing methods. Because of this homogenization can include many forms of milk in the family diet.

Our food habits are good when we are willing to eat the kinds and amounts of food that have been found by science to be necessary to give us nutritional property. Milk carries many of the nutrients vital to a healthy body. By using a generous supply every day we can get well, look well and feel well.

NOT CONTESTANTS, but certainly decorating the Dairy Princess Contest event, is Miss Mary Ellen Hannal, Green Hill, last year's Rockcastle Dairy Princess, and Miss Marjorie Myers, State Dairy Princess until a new one is crowned this fall at Louisville.

Do Better Job With Cows

By: W. E. Proctor, Chairman
Rockcastle County Soil Conservation District

June Dairy Month is a good time of the year for farmers to appreciate their green and lush pastures.

As dairying is the largest source of income, next to tobacco, in Rockcastle County we should do a more efficient job by keeping legumes with our grass and by fertilizing to keep it palatable and to keep a good stand. Plenty of shade and clean water should be provided during hot summer months.

By: Roy G. Brown
Field Representative
Cumberland PCA
June is Dairy Month all over the United States and we would like to congratulate the many dairy farmers in this special issue of the Mount Vernon Signal. Here in Rockcastle County for the good job they have done in many ways. They have increased the income in the county over one million dollars a year. Many boys and girls have had a chance to go on to high school and college by the added income. They have given the people a better balanced diet through dairy products. They have added many new barns, homes, gates and fences, and remodeled many more.

Dairy farmers have improved many acres by using lime, fertilizers, and seedling to legumes and legumes, and growing better crops through better use of the soil. Many new silos have been erected.

Dairy farmers have come a long way in higher producing cows by better housing and selection of dairy cows. Ever since the first dairy cattle were brought to this area in 1600, they have been a very important part of making America great, and we know they will continue to be vital to our continued growth and struggle for peace in the world.

Yes, your Cumberland Production Credit Association salutes the dairy farmers for bringing Rockcastle County its largest industry through long hours of hard work and willingness to do a great job. Everyone in the county has profited by this industry which would be very hard to estimate as it spreads out so far. The farm equipment dealer, appliance dealer, furniture dealer, gasoline and oil dealers, farm supplies, dairy supplies, and many others prosper along with the banks by additional increase of money from milk.

We also know that many problems face you now and in the future as dairy farmers, but we pledge you full cooperation in the future as in the past in whatever way we can be of assistance.

BIGGEST FOOD FACTORY
The dairy cow is the world's greatest food factory. She produces on the average from an acre of crops: 2,100 pounds of milk which contains 72 pounds of digestible protein and 712 units (therms) of energy.

County and district June Dairy Month committees have been urged by State Dairy Month chairman Manvil Vinson to maintain their organizations on a year-round basis to promote Kentucky dairy products.

In letters to district and county June Dairy Month chairmen, Vinson, assistant State agriculture commissioner, expressed appreciation for the work of the committees.

Vinson said the success of dairy month promotion "is occurring at a very appropriate time, and we are in serious need of additional market outlets for dairy products." In urging year-round promotion, Vinson said, "If we expect to progress in the dairy industry, we must make the best use possible of promotion and advertising."

He asked the committees to evaluate their 1962 promotions in reports for use in planning next year's June Dairy Month. More than 1,000 farm leaders are participating in the work of 65 county dairy month committees this month.

Milk Ups Area Income

E. Gentry. They are in a new convertible.

Evolution Of Our Cows

By: Dr. E. R. Burdette
Veterinarian

Cattle were used by man before he began to keep permanent records. Prior to their domestication, cattle were hunted and used as a source of food and other material. The word cattle is supposedly another form of the word "Chattel" and "Capital" meaning goods of property.

While living in the wild, the cow depended mostly on wild grasses for food and her man accomplishments were to produce enough milk to get her calf to the age that it could forage for itself. During the many years that the cow has been domesticated, she has seen many changes occur. Although the cow of today has the same anatomical parts as the wild cow, they may be compared as you would compare a 1962 automobile with a 1910 model.

Since domestication, the cow has been used for food, as a beast of burden, and as a source of milk. Through breeding the beef breeds, the dual purpose breeds, and the dairy breeds, have been developed. The Jersey, Guernsey, Holstein, Brown Swiss and Ayrshire comprise the dairy breeds today.

The life of a dairy cow today is much different from the life of her ancestors. She is brought into a modern milking parlor, usually voluntarily and milked with a milking machine twice daily. While being milked, she is fed a grain ration, a hay ration, and a silage ration. She is also given a mineral supplement. The dairy cow is still chiefly a forage consumer she receives, silage, hay, and pasture, usually in some form or another. While eating grain and silage, the cow has 94 jaw movements per minute and 78 movements per minute when eating hay. In addition to the jaw movements

during eating there is some 24,400 movements during rumination or chewing of the cud. The cow spends more than eight hours daily ruminating, thus there is a total of some 42,000 jaw movements daily in dairy cows. The cow has 32 permanent teeth for mastication of her food.

From the mouth the food goes into the stomach which is composed consisting of four compartments known as the rumen, reticulum, omasum and abomasum. The stomach has a capacity of approximately 266 quarts. The small intestine which is 100 feet long has a capacity of approximately 70 quarts and the large intestine which is 40 feet long has a capacity of 40 quarts. A 1,000 pound cow eliminates approximately 59 pounds of manure and 32 pounds of urine daily. The dairy cow has a heart rate of 60-70 per minute and a respiration rate of 18-20 per minute, and 77 percent of her body weight is blood. A cow producing 50 pounds of milk pumps about 10 tons of blood through her udder. Raw materials are carried by the blood to the udder from which milk, one of the most efficient foods known to man is secreted.

To get good milk production from a dairy herd proper management practices are essential. These should be dairy practices and not cow or monthly practices. The cow should be bred to a bull that will transfer good conformation and the ability to produce large amounts of milk to their offspring. By using artificial insemination this practice can be achieved. The heifer calf should be properly managed from the day it is calving and is removed from the herd. Proper ration should be fed, and heifers

should receive grain daily because they will not reach breeding size soon enough for range alone.

Large rugged heifers withstand the stress of heavy milk production and other stresses that the dairy cow is constantly exposed to better than the small heifer.

Adequate housing in dry cows is essential. The calves should be kept in individual stalls. A disease prevention program is an important management phase of the dairy herd. In your herd, neglect on prevention and neglect on treatment of the various diseases. Vaccines, bacterins, isolation of sick animals, and sanitation are some of the measures that you may use. It is important to keep the herd free of both external and internal parasites in order to get the maximum production from them. Be sure the cow is dried-off for two months each year. Besides producing milk she also gives birth to a calf each year. So the two months she is dried-off is the only rest she has.

The dairy cow spends a rather short and hectic life, but if she could talk, after seeing the many healthy bottle babies and the young calves drinking milk from the barrel, she would say, "It is worth it all."

SCHOOL MILK PROGRAM AID BY GOVERNMENT

The State Milk Board, through the Division of School Lunch, State Department of Education in the form of reimbursement payments to school lunch and milk programs. The average reimbursement per Type-A lunch served is approximately 4 cents. Schools operating both SMP and SMP are provided an additional 4 cents for each extra half-pint of milk served.

By: H. Lee Durifam
County Agent
(Credit for most of information goes to American Dairy Association.)

The story of milk as a part of the beginning of civilization is a long one. The first drawings, unearthed in the Sahara Desert and dating back 20,000 years, show many feature pictures of cattle. A 5,000-year-old mosaic frieze, found in an ancient temple at Uq, near Babylon, depicts a dairy scene showing milk containers and strainers.

Even mankind's earliest known writings, in now-extinct Sumerian, mention milk as one of the most essential of all foods. In fact, the word "milk" is derived from the Sumerian word "emphat," which is used to describe the action of milking an animal.

Down through the years, milk has continued to be a food of primary importance in the diet. The Bible makes many references to milk and even states that the promised land is one of "milk and honey." Writings from the ancient Egyptians, Greeks and Roman civilizations also describe the importance of milk. And Marco Polo noted that he had seen much of their strength and endurance to milk.

The history of dairying in America is older than the history of the United States as a nation. The first dairy cow came to Jamestown in 1611 and helped bring an end to a terrifying period of starvation. Other cattle had been brought into the country by Spanish explorers.

As the pioneers moved westward opening up the country, every stage of evolution was accompanied by a cow. The family cow factory was the mainstay of the dairy industry as modern and highly technical as any other American industry. Since dairymen could not assemble the pioneer's cattle and care in fact much more than the modern dairyman, he had to breed for more animals than he could care for. He had to breed for more animals than he could care for.

Great changes have taken place in processing and distributing the product. Milk today is pasteurized, homogenized, often fortified with Vitamin D, souled in artificial sweeteners, and, in general, processed to meet the needs of the earliest American dairy farmers. It is now a food that provides about 10 percent of our daily nutritional needs for only 15 to 20 percent of our food cost.

Great changes have taken place in the Dairy Industry in Rockcastle County. When Rockcastle County was established in 1810 there were 4,064 cattle. The future dairy industry included beef cattle as well as dairy cattle. At the present time there are an estimated 11,000 dairy animals in the county with an estimated income of \$900,000 from dairying, according to the 1961 Census. Some people in the county believe that dairying will surpass sheep raising as the major industry here in the future. So you see, dairying has given a great boost to the economy of Rockcastle County and is one of the most important farm enterprises. Let's give the dairy industry our support.

A New High

Kentucky dairy cows hit a new high in milk production during 1961. Data released recently by the U. S. D. A. Crop Reporting Board reports that the average dairy cow in Kentucky produced 5,200 pounds of milk for the year. This is 250 pounds above the 1960 production of 4,950 pounds. In the nation, however, the average dairy cow, checked during the same period, produced 7,211 pounds of milk—211 pounds more than during the previous year.

PART OF CROWD at the Dairy Day activities on Main Street. Most stand on the south side of Main Street in the shade. The stage was in front of the Bank of Mt. Vernon.

DAIRYING SECOND

Next to tobacco, Dairying is the most important farm enterprise in Kentucky. Even though farm prices of milk were lower in 1961 than in 1960, the cash receipts for milk sold by Kentucky farmers last year reached the all time high of 84.5 million dollars.

An additional 15 million dollars worth of milk was not sold, but was used on the farms where produced. No records are available on the market value of some 30,000 veal calves nor thousands of cull and discarded dairy cows and bulls sold annually, but the income from these would run into several million dollars.

Besides supporting a lot of farm people, dairying in Kentucky also provides a good living for a great many non-farm people. A large share of the gross farm income from milk immediately goes back into circulation for the purchase of feed and equipment and the payment of labor.

As soon as the milk leaves the farm, many additional services, such as trucking, processing, advertising and distribution go into it—all of which provide thousands of jobs and add millions of dollars to its value.

One of the fine features of the dairy industry is that it is constructive in all phases. On the farm it provides year round steady employment without the "peaks and troughs" that occur with most other enterprises and pasture and hay production conserves the soil and the manure adds to the fertility.

In the processing and distribution centers it gives much greater and more employment than is provided by other comparable industries. Most important of all, milk and its products are

healthy and nutritious. Milk can be used in many forms—fresh from the bottle as whole milk, low-fat milk or buttermilk; in cooking with whole, dried or evaporated milk; in ice cream, cheese, butter or cream.

There is hardly a dish that cannot be improved with the addition of milk or its products. Just the thought of a hunk or butter on a sizzling steak, a dipper of ice cream on a homemade pie or a pitcher of cream on a bowl of berries makes one hungry.

Each year June is proclaimed as Dairy Month. It is an appropriate time for Kentucky dairy farmers to re-appraise their operations and try to improve their efficiency.

It's a good time, too, for ordinary people like you, both on and off the farm, to consider the health building qualities of nature's most perfect food—MILK.

THE WINNER—Jimmy Hines, of Mt. Vernon, was the winner of the milk drinking contest at the Dairy Field Day. With him is Wayne Stewart, master of ceremonies, and Gary Doan, also a contestant.

From Cow To Can

Many small dairymen selling manufactured milk to

cheese plants and condenseries are learning that they can increase their production, produce higher quality milk and, at the same time, make their work easier, more pleasant and more profitable.

They have been able to do this by using inexpensive elevated stall milking parlors along with cow-to-can milking machines.

Elevated stall milking parlors are simple arrangements in which the cows are elevated to allow milking without stooping. One person can feed, milk and move the cows in and out with a limited amount of walking.

Elevated stall milking does not require an elaborate building. The stalls can be constructed to fit in most existing barns. They require very little cash outlay, usually from \$50 to 300.

Farmers who have changed to elevated stall cow-to-can milking are quick to praise this modern, easy, inexpensive way of milking cows. They say that one man can easily milk 12 to 15 cows per hour.

grain ration with only 4.1 percent fiber. What were the results? It helped the cows to have a lower body temperature, lower respiration rate and a lower pulse rate. Furthermore, the cows produced more milk.

Your Milk Price

By Bill Morison,
Co-Chairman
Dairy Committee

The price we get for milk is still determined by that old law of supply and demand. Consumption of milk and dairy products per person is down and surplus is still a problem.

Faced with a situation, such as this, the dairy farmer backs against the wall and says, well, there is not much I can do individually to correct the problem. Some think the best way out is to go out of the dairy business.

But wait, there may be some things we can do to make the dairy show a greater profit even though milk prices are not as favorable as we would like them to be. Let's see what we can do.

Ask yourself, Is there any part of my operation that could be changed that would increase profits? Some questions might be:

Am I keeping good records? Can I cut costs anywhere? Should I cull some cows? Is each cow showing a profit? Am I breeding for higher producers? Is my feeding program adequate?

Could I have better pastures? Should I feed silage? Could I produce the same amount of milk with fewer cows? Could I arrange to use less labor? There are many more questions we should find the answer to in analyzing the profit situation of the dairy farm.

We need to do everything possible to keep the price of milk up. But, remember, milk price alone does not determine your profit.

Farming today is a highly competitive and specialized business requiring the technical knowledge of many professions. Your neighbor dairyman is your competitor—producing at a profit or loss. If he is trying to "plug" the profit leaks you are in a race with him. Profit or loss each is contributing to the total volume of milk produced which affects supply and surplus.

It has been said that without the low inefficient cow there would be no surplus but a shortage of milk and milk products.

The dairyman who makes every cow an efficient producer (plugs the profit leaks) will be the dairyman who stays in business and produces the milk in the future.

More profit to you.

Products Prices

Milk prices the rest of this year probably will average "considerably lower" than the price levels of a year ago.

That's one statement in the UK Cooperative Extension Service's bi-weekly business outlook letter.

One reason for the lower level, says economist Wilmer Browning, is the reduction in support price levels for milk and butterfat. As of March 20, 1962, the support level for manufactured milk was set at \$3.11 a hundred pounds and the price of butterfat 57.2 cents a pound. These prices are 29 cents a hundred pounds and 32 cents a pound lower, respectively, than for 1961.

Milk production the first quarter of this year was slightly higher than for the same period of 1961, the report says, but milk prices

were only slightly lower. Numbers of milk cows will continue the steady downward move, the report says, but production per cow probably will increase again. A decrease in concentrates fed milk cows may cut this higher-production-per-cow trend slightly.

Consumer prices for dairy products probably will average about 1 per cent lower this year. Fluid milk prices at retail likely will show little change to the consumer as distribution costs rise. Cash receipts to dairy farmers probably will be lower this year, too.

The report cautioned farmers to emphasize greater efficiency in dairying, concentrating on building high-producing herd individuals, high quality forage programs, and better records and feeding systems.

Each year June is proclaimed as Dairy Month. It is an appropriate time for Kentucky dairy farmers to re-appraise their operations and try to improve their efficiency.

It's a good time, too, for ordinary people like you, both on and off the farm, to consider the health building qualities of nature's most perfect food—MILK.

In the processing and distribution centers it gives much greater and more employment than is provided by other comparable industries. Most important of all, milk and its products are

BEREA COLLEGE DAIRY EXHIBIT.

Dairy Month Means Much More Money

June Dairy Month—when supplies of dairy foods are at their peak—means attractive prices on the featured dairy items this month, notes Mrs. Letta Jasper, UK Extension specialist in consumer marketing.

The many dairy products available include milk, ice cream, cottage cheese, buttermilk, cream (coffee and whipping), butter, cheese, evaporated milk, nonfat dry milk, sour cream and skim milk—as well as combinations of these with other foods.

Poultry products, too—especially broiler—fryers—will increase in supply over the next few months, although prices may be a few cents more than at this time last year. Turkey prices will be attractive even though they will be slightly higher than a year ago. Egg prices will continue lower than at this season last year.

The plentiful supply of broilers may hold beef prices somewhat in check, Mrs. Jasper says. Look for especially good buys on beef cuts that are less popular in

summer—roasts and other long-cooking cuts. Pork supplies are lower at this time of year, so prices on fresh pork will climb upward slightly. Prices for lamb cuts also increase during this season.

Plentiful supplies of both fresh and frozen fish will be on the market during June, she predicts. Scallops, whitefish, yellow perch, cod, flounder, haddock, ocean perch, clams, frozen steaks, and portion fish will be readily available.

KEEP COWS COOL FARMERS ADVISED

Do you want to help your dairy cows keep cooler during the summer months? Most dairymen use shade and water to help cows keep cool. There is one other practice that will help. It was discovered just a few years ago.

The new idea is to keep the fiber content of the grain mixture as low as possible. Several years ago workers at the Texas Agricultural Experiment Station used a

toast to an essential industry

"Vital" is the word for the job of our dairy farmers. They're the men who supply us with nature's most perfect foods—cool milk, ice cream, rich cheese and pure cream butter. June is their month. And here's our heartfelt "thank you" for a job well done.

Emphasize Dairy Month!

By: Russell Parsons
Agriculture Teacher
Mt. Vernon School

June is dairy month all over the nation. To many states and counties dairy month does not have the meaning that June as dairy month has or maybe should have in Rockcastle County.

Let's consider a few of the many reasons that June is particularly important to farmers, businesses, and all people in this county. First of all, the main and primary reason of all farming or human undertaking in any business in this country is for the capital return, or the living one gets from his work, time, and investment.

Dairy farming as an enterprise in Rockcastle ranks next to barley tobacco in money received by farmers. This income comes in bi-monthly, whereas the income from tobacco comes only once yearly. This is very important to farmers in 1962 for several reasons:

- (1) farming is highly mechanized and specialized today;
- (2) farmers buy many commodities just as city people do because we do not follow a self-sufficient type of farming where everything we need is produced on the farms;
- (3) The standard of living today is higher and demands that farmers buy more.

Not only from the profit important to this county, but also because of the many jobs there are in dairy farming, and those created by this dynamic enterprise. When one thinks of all the dairy farmers both large and small, the men, the women, and the children employed on these farms, of all the truck drivers both the pickup and the distributors, of all the feed stores and feed mills employees, of all the fieldmen, of all the process-

or employees, and of all the retail merchants that sell dairy products, then only then can one realize the true importance of dairying in Rockcastle. Do you know of any other industry in this county that employs this many people?

Then there are so many other advantages in dairy farming that it would be impossible to name them all. We all know that this county has a topography that is best used by keeping it in a protective covering. In other words, on our farm land, we can control erosion by growing grass and legumes. Dairy farming fits well this kind of farming. Then let's think about our hay. How many acres of alfalfa hay were in Rockcastle County before we got the dairy cows? Wasn't dairying a factor encouraging farmers to grow this fine hay crop? How about silage? Is this too like the hay? We are not saying that these are good only for dairy farmers. Beef producers can also profit from their use.

Let us consider our soil for a moment. Have you stopped to think that you sell less fertility of your land with dairying than with other types of farming? Have you seen Rockcastle with this much of its farm lands covered with grasses before? These things are not only important to the people living in this county today, but will also mean whether your sons and daughters and generations to come will find an opportunity to live and work in this county. The land is our great heritage. We can protect it and use it so that it will become better year after year. Dairy farming one way of doing this.

Dairy field days and dairy shows in this county are enjoyed and promoted for the good of all residents. Judges, extension specialist, State Department of Agriculture personnel and many others come to our county on these and other occasions to help us all either directly or indirectly. For example, farmers gain valuable information

on the latest farming practices which they can put into use on their farms. Business people benefit directly as well as indirectly by having these people in our county. Restaurant, filling station, and other service proprietors get extra business. Indirectly as the farmer makes more money from his enterprises all other business receive extra patronage. We can say the same things about the promotion of June as Dairy Month in Rockcastle County.

Finally, we should be proud of the many achievements that have been made in this county not only in the field of farming, but in working and cooperating together for a better county. We should all be proud of the great improvements made in our roads, schools, churches, and towns, and in the Renfro Valley Enterprises, Inc. We have made a good start. If we continue the good work of all pulling together, by next Dairy Month 1963, Rockcastle will have the soil "pinned-down" with grasses and legumes. Corn yields are also skyrocketing.

MILK DRINKING CONTESTANTS had to win by drinking the milk from a baby bottle. In the prescribed time, only about two inches of the milk disappeared. In the background is Wayne Stewart who was master of ceremonies.

Our Area Grass

By: Clay A. Colson
Soil Conservation Service

Rockcastle County grass is bringing over a million dollars a year to farmers through milk and dairy products. The fastest growing industry in Rockcastle County is agriculture.

More pounds of milk, more acres of improved pasture, more acres of good legume and grass hay, more pounds of tobacco per acre, more Brucellosis (B-ops) free livestock, more silos to store feed, shows agriculture on the march.

Not many years ago our only pastures and hay were Korean and herd grass (red top). Now you can never get out of site of good green fields of orchard grass, festuca, clover, alfalfa, sericea and other good grasses and legumes. Corn is coming off the steep slopes and we have the soil "pinned-down" with grasses and legumes. Corn yields are also skyrocketing.

C of C Works

The Rockcastle County Chamber of Commerce is interested in and working to get some industry or industries to locate in this county, so that we will have employment for people who want to work, and our children when they have finished school might have employment at home and not have to leave the county and state. We need them to work here and make their money and pay taxes in Rockcastle for a more progressive county.

The Chamber of Commerce will continue to work toward that goal.

The Rockcastle Chamber of Commerce believes the dairy industry with the milk plant in Rockcastle and others nearby, is furnishing more employment, bringing in more money, and building up our county more than any small industry.

The Rockcastle Chamber of Commerce congratulates the dairy industry and its many wonderful people for the fine job they are doing, and offer our continued support in any way we can be of assistance.

The Chamber of Commerce hopes within a few years to be able to get some kind of industry to locate here to give work for part time farmers and others, not to take your place, but to supplement the industry and agriculture we already have.

So, hats off to a wholesome and clean industry that is so vital to the progress and prosperity of our county.

Rockcastle Chamber of Commerce

MICHAEL NORTON, of Mt. Vernon, was one of the winners of five silver dollars in the drawing held at the Dairy Field Day. Here he displays the money in a happy mood.

But, Jacobson says, of the 3.9 tons for the thick-planted, at least five-sixths of this tonnage came from the first planting-harvesting; the second planting (put in in early August) was a virtual failure. It was planted too late, dry weather got it, and fall armyworms were destructive.

CORN AND CATTLE GO TOGETHER

Dairy science and agronomy researchers at UK last summer tried planting corn "thickly"—at a rate of about 150,000 stalks per acre—to see if more nutrients per acre could be realized.

But when the crop was harvested—at a very early date, when the corn was still in the milk stage—the nutrient level was not significantly higher than regularly planted corn (about 18,000 plants an acre).

D. R. Jacobson, dairy science researcher, says he questions the practicality of the system for this and other reasons.

The nutrient level, as explained above, was one. A second is harvesting difficulty. A third is that the corn because it was cut so early, was high in moisture content. When put in a silo, the stored forage could be expected to have a very high runoff of nutrients trickling out from the bottom of the silo.

When the forage was put in a silo the thick-planted was high in water content. Only 15 per cent of its weight was dry matter. The regular planting, however, had 35 per cent dry matter. Also, the thick-planted batch had only 63 per cent TDN in the dry matter, compared to 75 per cent for the regular planting.

Cows ate more of the thickly-planted silage, he said, but since it had such a high water content, the cows intake of dry matter was lower than desired. This caused a drop in milk production.

Harvesting was also a chore. Jacobson says a heavy duty, flail-type chopper was needed for efficient work. These reasons are why Jacobson questioned the system's practicality for Kentucky use. But he will investigate the matter further.

Enjoy Ice Cream, It's Quick, Cool and Casual. There's no more easy going (or better tasting) dessert than refreshing ice cream, cake and fresh fruit. How about having some tonight.

Enjoy Milk, It's Quick, Cool and Casual. What could be quicker, cooler or more casual than a tall refreshing glass of milk. Keep milk on your table, it's "the pitcher of health."

"This message is brought to you by DAIRY FARMERS IN ROCKCASTLE COUNTY through their American Dairy Association Of Kentucky

Nothing adds more freshness and flavor to baked goods or anything you cook than butter. Tonight try butter on rolls fresh from the oven. Mmmmmmm, such flavor.

Set Softball Games Here

The top four teams in the adult league in the summer softball program will go against each other in a double-header beginning at 7 p. m. July 5.

Which of the teams will play will depend on the winners in the next few nights. The first ranking team will oppose the third ranking team, and the second ranking team will play the fourth ranking team, according to Larry Travis.

On July 6, in conjunction with the Rockcastle Homecoming at Livingston, the Comets will play Livingston, and the Bullets will meet the Teenagers in a double-header.

Scores of games played through last Saturday are as follows:

- Jets 13, Cubs 10
- Orleans 12, Redox 5
- Braves 7, Colts 5
- Bullets 12, Teenagers 9
- Livingston Girls 13, Mt. Vernon Girls 7
- Yanks 8, Orioles 0
- Braves 7, Dodgers 4
- Ottawa 13, Aces 4
- Orleans 9, Bulls 5
- Tigers 12, Redox 4
- Livingston Girls 15, Brodhead Girls 12
- Rebels 32, Brodhead 1
- Colts 9, Jets 0
- Giants 8, Dodgers 4
- Orleans 12, Redox 3
- Mt. Vernon Girls 19, Brodhead Girls 5
- Comets 12, Livingston 2
- Tigers 3, Yanks 0

Motorcycle Wreck Injures Local Man

A Brodhead man was injured Wednesday afternoon when the motorcycle he was riding collided with an auto.

Injured was Moses E. Albright, 23, of near Brodhead. He collided with an auto driven by Arthur I. Ross, of Brodhead on US 150 and near the Brodhead city limits.

According to State Trooper Darrell Steele, Ross was charged with driving under the influence of intoxicating beverages and for driving on the wrong side of the road.

Albright was taken to Rockcastle County Baptist Hospital where his condition and injuries are undetermined.

Child Hit By Car

Doris Ann Sparks, 6, of Otway, was shaken up Saturday when she was hit by an auto on Richmond Street at Mt. Vernon.

The child was struck by a car driven by Floyd Denney, 37, of Chestnut Ridge, according to State Trooper Darrell Steele.

Denney was charged with leaving the scene of an accident, operator's license, and improper registration plates.

No report was made on the extent of her injuries.

Mrs. Effie Ballard Funeral In Ohio

Mrs. Effie Laswell Ballard, 78, of Dayton, Ohio, died of a heart attack June 17 at a Dayton hospital.

Mrs. Ballard was born at Orlando, the daughter of David and Flora Clark Laswell. About 39 years ago she and her son, Roscoe, moved to Dayton where she was a member in the Grace Green School until she retired a few years ago. She was a member of the Baptist Church.

Besides her son, she is survived by a grandson, a great-granddaughter, and a great-grandson. She was buried in Providence Cemetery, Sparks Funeral Home was in charge of arrangements.

NEW DAIRY PRINCESS - Miss Loreta Roberts, left, daughter of Mr. and Mrs. Earl Roberts, of Mt. Vernon, was crowned 1963 Dairy Princess by Miss Mary Ellen Hansel, 17, living princess at Dairy Field Day ceremony last week at Mt. Vernon. Miss Roberts is a home economics major at Cumberland College.

DAIRY FIELD DAY STAGE - The stage from which many of the activities for Dairy Field Day were held was erected in front of the Mt. Vernon. Most of the crowd stood on the sidewalk on the south side of the street out of the hot sun. An estimated 300 persons attended the activities.

Rules On Voting Machines

The State's mandatory voting machine law was declared unconstitutional Monday, setting the stage for a fight on the issue before the Court of Appeals.

In ruling against 16 members of the Junior Chamber of Commerce, Circuit Judge R. C. Tartar said Pulaski County could not be forced to use the machines.

Members of the Junior Chamber of Commerce, led by Fiscal Court refused to buy the devices.

Leading the fight against the machines were two members of Fiscal Court, L. W. Thompson and Lavey Floyd, who contended that 98 percent of the people of Pulaski County are against voting machines.

Attorneys for the chamber said the State Constitution, it stipulates in part that any counties so desiring may use the machines.

Plan RECC Show At McKee

The big 1963 annual meeting and fair show of the Jackson County Rural Electric Cooperative will be held on July 5 at the Bond Park in McKee according to Luther Farmer, cooperative manager.

The four-hour program will consist of entertainment by professional performers, a beauty contest, two drawings for free prizes, a business meeting and two presentations dealing with the progress of rural electricity and electrical safety.

Several thousand, 16 to 22 years of age, previously unmarried and members of co-op consumer's family, are eligible to compete in the beauty contest.

The young lady selected by the judges will be crowned "Miss Jackson County Rural Electric Cooperative of 1963." She will also represent Jackson County at RECC in the annual state beauty contest which will be held in Louisville at the Kentucky State Fair and Exposition Center in September.

Applications for the beauty contest may be obtained from the Jackson County RECC office at McKee. Visitors in addition to members are invited to attend the show and will be entertained by six professional acts. These include the Missians, a balancing act which combines skill and daring. Circus and hits.

(Continued on page 4)

Local Theatre Opens In July

The Vernon Theatre will open April 30, will open sometime in July.

The theatre has been erected by Jack Combs and R. H. Pillion, of Mt. Vernon. According to Mrs. Combs, the theatre will undergo some remodeling now a bit more as time goes by. A concession stand will also be added.

He said he expects to have "fast-turn" movies at least for awhile.

The theatre closed last year when Mrs. Daisy Miller, first after operating the theatre for many years.

A definite opening date will be announced by the operators as soon as the remodeling is complete and matters have been arranged.

Mrs. Julia Middleton Dies At Hamilton

Mrs. Julia Middleton, 78, of Hamilton, Ohio, died of a heart attack June 23 at a Hamilton hospital.

Mrs. Middleton was born in Hamilton, Ohio, the daughter of James and Mary Middleton. She was a member of the Hamilton Baptist Church.

Survivors include her husband, James Middleton, of Hamilton, Ohio; two sons, James and Harold D. Middleton, of Hamilton, Ohio; and a daughter, Mrs. L. G. Hamilton, of Hamilton, Ohio.

Funeral services will be held at 10 a. m. Sunday at the Hamilton Baptist Church.

Interment will be in the Hamilton Cemetery.

Ordination Service Held For Bert Cox

Ordination services for Bert Norman Cox were held Sunday at the First Christian Church, London.

Bert, as he is familiarly known, received his Bachelor of Divinity degree in June at the College of the Bible, Lexington. He has been active in church and educational circles since boyhood, and is now Assistant Dean of Men and the University of Kentucky.

Bert is the son of Mrs. Boone Cox, of London, and R. E. Cox, Des Moines, Mich. He is the grandson of Mrs. Lola Cox, of Mt. Vernon.

INCOME TAX CLIENTS

Will be at Dixie Boone Motel on July 12th, 13th and 14th. Telephone 256-2444.

Maureen Laswell Egan

NEW BLACKTOP - Larry Travis, Mt. Vernon playground director, is at work on a new outdoor basketball court at the rear of Mt. Vernon High School. The blacktop was made possible by funds from the Mt. Vernon High School Activity Fund and from the Recreation Council. The council money was in the fund when the summer program was a Mt. Vernon program. Since that time it has been a county-wide program.

Recreation Program And Its Objectives

The summer recreation program for county youth people will develop and improve their physical and mental health through various activities.

Objectives of the program are: (1) To teach proper use of leisure through sports and sportsmanship; (2) To develop graceful movement of the body; (3) To encourage the interest of all citizens in recreation activities.

All of the money to keep the recreation program going over the years has come from contributions from individuals and firms, and from the now-familiar radio auction, from which was realized about \$1,800 this year.

It is the hope of the council and recreation leaders, Mr. Travis said, that the public will continue to keep the recreation program a vital part of summer community life. It gives the youngsters (and the oldest) an outlet for energy by letting them participate and observe the softball play, and by creating and learning skills in the crafts classes.

Mr. Travis extended an invitation to everyone in the county to go to the near-playground for an evening of entertainment.

Mrs. Ruby Brown Buried At Orlando

Mrs. Ruby Brown, 78, of Orlando, Fla., died of a heart attack June 23 at a Hamilton hospital.

Mrs. Brown was born in Hamilton, Ohio, the daughter of James and Mary Brown. She was a member of the Hamilton Baptist Church.

Survivors include her husband, James Brown, of Hamilton, Ohio; two sons, James and Harold D. Brown, of Hamilton, Ohio; and a daughter, Mrs. L. G. Hamilton, of Hamilton, Ohio.

Funeral services will be held at 10 a. m. Sunday at the Hamilton Baptist Church.

Interment will be in the Hamilton Cemetery.

Walter Singleton Funeral Conducted

Walter Singleton, 78, died suddenly at his home at Chestnut Grove Thursday.

He is survived by two sisters, Bertie Essman and Maggie Chastain, of Dayton, Ohio; two brothers, Perry Singleton of Hamilton, Ohio, and Pearl Singleton, of Covington.

Funeral services were conducted at Brodhead Christian Church June 23. He was buried in Wesleyan Cemetery, Watson Funeral Home, Brodhead, was in charge of arrangements.

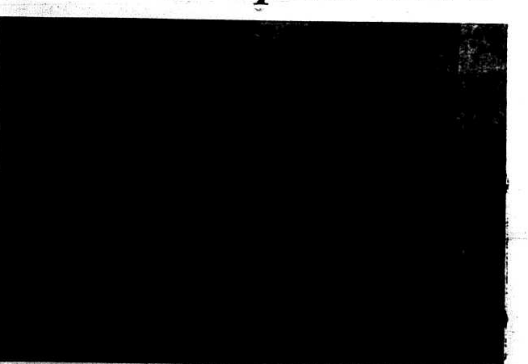

New Loan Firm Opens Here

The Rockcastle Loan Service went into operation Monday in a remodeled office located in the old Bank of Mt. Vernon Building on Main Street at Mt. Vernon.

The new loan service is the first of its kind to be located in Rockcastle. It will be open Monday through Saturday from 9 a. m. to 4 p. m.

Managing the new loan firm is Robert Grant. Mr. Grant is a native of Richmond, a graduate of Washington High School. With the exception of a short time in Centerville, Illinois, he has lived in the Central Kentucky area.

Following graduation from high school, he entered the loan business and has been in that business for the past four years. He managed a loan office at Richmond. He is a member of the Baptist Church, Lion's Club, Civitan Club, a Scoutmaster, and a sergeant in the National Guard. He and his wife, his

JUNE Dairy Month ADVICE TO THOSE WHO MUST WATCH THEIR PENNIES

1 start a SAVINGS ACCOUNT. Actually all of us should watch our pennies. And no matter what our income, we can save something each week.

2 save plenty of DAIRY FOODS. Because it's June Dairy Month we want to point out this other example of thriftiness. Dairy foods are not only delicious and nutritious, but economical, too.

Bank Of Mt. Vernon

COME "EAT" AND SEE THE GAMES

the HURLEY Press-ironer

SOLVES THE IRONING AND PRESSING PROBLEMS FOR THE ENTIRE FAMILY!

1. Irons the family wash bundle... including wet wash
2. Dressmaking... press as you sew... Like a tailor!
3. Presses street wear apparel!
4. Anyone, aged 12 and up, can operate it!

IT'S PORTABLE: weighs only 24 lbs. Use in any room, or in your car, or in the garage.

DAD: It's fun to keep my pants like it too.

MOM: It's just like a small pressing shop right in your own home.

NEVER before available except in time limited commercial pressing machines... This is the first Press-Ironer... that every member of the family can use... Now... you and your kids can use it too... right in your own home!

Reduces the high cost of keeping neat... Restores a knocked out crease... easily... quickly! Saves time. Saves temper!

nates clothes drying clutter and the drying cycle.

It's the size of 10 hand irons... with heat and pressure... in the right combination... for acceptable ironing or pressing!

Reduces the high cost of keeping neat... Restores a knocked out crease... easily... quickly! Saves time. Saves temper!

HURLEY PRESS IRONER OF AMERICA
Berea, Kentucky

"I want the best for my family That's why we live electrically"

SURE, it costs a little more — but not more than it's worth. We could save maybe 75 cents a month if we cut out the TV. If we did that we'd certainly get to bed earlier and save on lights, too.

Maybe save another dollar and a half if we quit using the clothes dryer — went back to wrestling a wash basket and worrying about the weather.

We could even go back to old fashioned 'cooking' . . . or heating water in a teakettle, or go back to ice and save a dollar a month on electric refrigeration.

Would the savings be worth it? There may be better ways to spend a few extra dollars a month than on electricity — but not if you want first class living for your family — electric living.

ADVERTISEMENT FOR BIDS

FOR

Three Classroom Addition

For Mt. Vernon High School

Mt. Vernon, Ky.

Scaled proposals will be received by the Rockcastle County Board of Education, Mt. Vernon, Kentucky, at the Office of Mrs. Neureul Miracles, Superintendent, Rockcastle County Schools, Mt. Vernon, Kentucky, until 2:00 P. M. EASTERN STANDARD TIME, JULY 3, 1962, for the construction of a Three Classroom Addition for Mt. Vernon High School, Mt. Vernon, Kentucky.

Immediately following the scheduled closing time for reception of bids, all proposals which have been submitted in accordance with the Contract Documents will be publicly opened and read.

Plans and Specifications and Contract Documents may be examined at the following places:
 Brock and Johnson, Architects - 159 Barr Street, Lexington, Kentucky.

Office of: Mrs. Neureul Miracle, Superintendent, Rockcastle County Schools, Mt. Vernon, Kentucky, or may be obtained from Brock and Johnson, Architects, 159 Barr Street, Lexington, Kentucky, upon deposit of \$10.00. The deposits of Contractors bidding upon the work will be returned upon the receipt of Plans and Contract Documents in GOOD CONDITION within ONE WEEK after bids are opened.

Bids must be accompanied by a certified check or bid bond, payable to the Owner, in an amount of not less than 5% of the Bid.

No bidder may withdraw his bid for a period of 30 days after the date set for the opening of bids. Bids received after the scheduled closing time for the reception of bids will be returned unopened to the bidders. The Owner reserves the right to reject any and all bids, or to let a Contract as a whole, or for any part and to waive informalities.
